

Cohen ASR audit repository evidence archive

Archive/check date: August 24, 2026

Purpose: preserve the case-specific web evidence underlying four classifications in the harmonized 2023/2025 replication-package audit. These are local evidence PDFs, not byte-for-byte webpage captures. Each file records the resolving URL, the evidence observed on the check date, and the classification consequence.

File	Case	Why retained
01_Cheng_Harvard_Dataverse_evidence.pdf	Cheng et al.	Pre-2024 public Dataverse material despite Cohen's 'Nothing' row
02_Silva_OSF_and_Cohen_audit_evidence.pdf	Silva et al.	Audit-date OSF access barrier; 8/18 vs 9/18 sensitivity
03_Smith_GitHub_evidence.pdf	Smith et al.	README states no data and describes approval-dependent access
04_Brady_replication_code_evidence.pdf	Brady et al.	Public code but source data cannot be provided by the authors

Archival caution: repository interfaces, access settings, and hosted files can change. For historical claims, the dated contemporaneous record controls when available. Repository creation dates and commit dates are not treated as proof of when a resource became public.
