

Silva, Bloemraad and Voss - OSF accessibility evidence record

Archive date: August 24, 2026

Capture type: Local evidence PDF preserving the repository identifier plus Cohen's contemporaneous audit observation

Resolving URL: <https://osf.io/amxdb/>

Earliest relevant public date: Audit observation dated December 2025

Observed evidence

The published ASR Data Availability Statement links replication materials to OSF project amxdb. Cohen's December 10, 2025 audit table records that this project "requires access request" and records a request at 12/9 12:30p. In the same post he says an OSF project requiring permission should not be allowed.

Audit classification significance

Under the harmonized rule, this is the accessibility sensitivity case. The strict audit-date coding is fail because public access was not available without approval when Cohen checked. Counting it despite that barrier yields the 9/18 sensitivity result.

Archival note

The OSF page itself returned a 403 to the archival fetch used here, so this record does not claim to be a visual capture of the current OSF interface. It preserves the project URL and the contemporaneous audit evidence that controls the historical classification.
