

Brady, Luft and Zuckerman Sivan - replication code evidence record

Archive date: August 24, 2026

Capture type: Local evidence PDF generated from the source PDF metadata and first-page text

Resolving URL:

<https://bradydave.wordpress.com/wp-content/uploads/2024/12/replication-code-bradyluftzuckerman.pdf>

Earliest relevant public date: Source PDF printed December 20, 2024

Observed evidence

The source is a 13-page PDF titled "Replication Code BradyLuftZuckerman." Its first page states that some code builds on materials supplied by the original study authors and that potentially confidential data were shared with Brady et al. It then states: "we cannot now provide replication data for others." The code also contains author-specific local file paths.

Audit classification significance

Fail under the harmonized rule on access. Code is public, but the analysis data do not have a documented institutional route available to third parties and cannot be supplied by these authors.

Archival note

This record preserves the source-PDF URL, page count, printed date, and the access statement that determines the coding. It is not a substitute for retaining the original source PDF if a direct binary download becomes available.
